High Pressure Reducing Valve - Lead-Free

With Balanced Seat

Application

According EN 806-2 pressure reducing valves of this type protect household water installations against excessive pressure from the supply. They can also be used for industrial or commercial applications within the range of their specification.

By installing a pressure reducing valve, pressurization damage is avoided and water consumption is reduced. The set pressure is also maintained constant, even when there is wide inlet pressure fluctuation. Reduction of the operating pressure and maintaining it at a constant level minimizes flow noise in the installation.

Special Features

- LEAD-FREE: Pb content of all materials in contact with medium less than 0.1 %
- Inlet pressure balancing – no influence on outlet pressure by fluctuating inlet pressure
- The valve insert is of high-quality synthetic material and can be fully exchanged
- The outlet pressure is set by turning the adjustment knob
- The adjustment spring is not in contact with the drinking water
- Integral fine filter
- Can be retrofitted with an inlet check valve
- All materials in contact with medium follow UBA and ACS conformity
- 5-year warranty

Technical Data

Medium	
Medium:	Drinking water
Connections/Sizes	
Connection size:	$^1/_2$" - 2"
Nominal sizes:	DN15 - DN50
Pressure values	
Max. inlet pressure:	25 bar
Outlet pressure:	1.5 - 12 bar
Preset outlet pressure:	5 bar
Min. pressure drop:	1 bar
Operating temperatures	
Max. operating temperature medium (10 bar):	70 °C
Max. operating temperature medium accord. to EN 1567:	30 °C

Construction

Overview

	Components	Materials
1	Spring bonnet with adjustment knob	High-quality synthetic material
2	Housing with pressure gauge connections on both sides	Lead-free brass
3	Threaded male connections	Lead-free brass
4	Pressure gauge connection port $^1/_4$" (pressure gauge see accessories)	High-quality synthetic material
5	Filter bowl	Lead-free brass
	Not depicted components:	
	Adjustment spring	Spring steel
	Valve insert complete with diaphragm and valve seat	High-quality syntheticmaterial, EPDM diaphragm
	Fine filter with 0.16 mm mesh	Stainless steel
	Seals	EPDM

Method of Operation

Spring loaded pressure reducing valves operate by means of a force equalising system. The force of a diaphragm operates against the force of an adjustment spring. If the outlet pressure and therefore diaphragm force fall because water is drawn, the then greater force of the spring causes the valve to open. The outlet pressure then increases until the forces between the diaphragm and the spring are equal again.

The inlet pressure has no influence in either opening or closing of the valve. Because of this, inlet pressure fluctuation does not influence the outlet pressure, thus providing inlet pressure balancing.

Transportation and Storage

Keep parts in their original packaging and unpack them shortly before use.

The following parameters apply during transportation and storage:

Parameter	Value
Environment:	clean, dry and dust free
Min. ambient temperature:	5 °C
Max. ambient temperature:	55 °C
Min. ambient relative humidity:	25 % *
Max. ambient relative humidity:	85 % *

*non condensing

Installation Guidelines

Setup requirements

- Horizontal and vertical installation position possible
- Install shut-off valves before and after D06FH for maintenance
- The installation location should be protected against frost and be easily accessible
  - Pressure gauge can be read off easily
  - Simplified maintenance and cleaning
- Install downstream of the filter or strainer
  - This position ensures optimum protection for the pressure reducing valve against dirt
- Provide a straight section of pipework of at least five times the nominal valve size after the pressure reducing valve (in accordance with EN 806-2)
- Requires regular maintenance in accordance with EN 806-5

Ordering Information

The following tables contain all the information you need to make an order of an item of your choice.

Options

The valve is available in the following sizes: 1/2", 3/4", 1", 1 1/4", 1 1/2" and 2".

		D06FH-...LFB
Connection type:	External threaded connection set on in- and outlet	•

Note: ...= connection size.
